| Sukhrob Alimov | 220386 |
| Odina Otayorova | 230159 |
| Akbarova Farangiz | 220849 |
| Abduraxmonova Marjona | 230781 |

Team of 4: 1) VR/Unity development 2) Multiplayer networking & game logic 3) 3D environment, puzzles & UI 4) Interaction, testing & documentation.

## Goal:

Create a multiplayer VR escape room where two or more players can explore the same virtual environment, interact with objects, and solve interconnected puzzles together.

## Stage / Tasks

| Stage | Tasks |
|---|---|
| 1. Research | Study VR interaction, multiplayer VR systems, escape room mechanics and puzzle design. |
| 2. Technology | Use Unity, C#, Meta Quest VR tools and multiplayer networking. |
| 3. VR Setup | Set up the VR environment, player movement, controllers and basic interactions. |
| 4. Environment | Create the escape room, add rooms, doors, objects and interactive elements. |
| 5. Puzzles | Create interconnected puzzles that require players to cooperate and share information. |
| 6. Multiplayer | Implement player synchronization, shared object states and multiplayer interactions. |
| 7. UI & Feedback | Add instructions, hints, puzzle feedback, timers and game completion messages. |
| 8. Testing | Test multiplayer interaction, puzzle logic, synchronization and overall usability. |
| 9. Finalization | Prepare the report, diagrams, presentation and final VR demo. |

## Minimum features:

Multiplayer VR environment, player movement, object interaction, shared puzzle solving, synchronized object states, interconnected puzzles, hints, timer and escape-room completion system.
